

Networkx

- Library / package / file
- Supports python language
- Graph Implementation

Nodes edges

- 1) It is used to build and Store Networks
 - 2) It is used to Create Networks and Draw networks
 - 3) It is used to analyze / Study complex Networks
- ~~It is a complex N/w~~

- 4) It is used for Rapid development, collaborative Implementation of Network

8 How to create Syntax

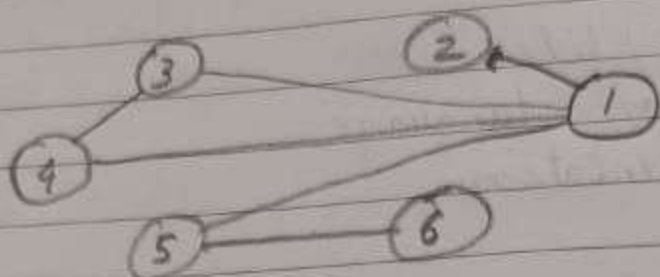

- 1) Install Networkx

~~Graph~~ G.add_node(1) // node creation

G.add_nodes_from([2, 3], [4, 5], 6) // list of Nodes creation

Date ___/___/___

Added nodes in Graph G

4) Create edge

G.add_edge(1, 2)
G.add_edge(5, 6)
G.add_edge(3, 4)
G.add_edge(1, 4)
G.add_edge(1, 5)
G.add_edge(1, 3)

// List of edges

G.add_edges_from([1, 2], [1, 3], [5, 6])

To remove node :-

G.remove_node(1)

~~test~~ To remove list of nodes :-

G.remove_node_from([1, 2])

To remove edge :-

G.remove_edge([1, 3])

To remove list of edges:-

G. remove - edge - from (E, I)

week:-

unit - I: week 1, week 2

unit - II:- week 3, week 4, week 5

unit - III: week 6, week 7, week 8

unit - IV:- week 9, week 10

unit - V:- week 11 and week 12

Difference between Social media and Social Networks
Directed graph and undirected graph

What is crawler / Spider?

What is graph? Explain undirected/directed graph in detail

Explain web graph
google Page Rank algorithm

What is Social Media Marketing? Explain benefits of the same

Write a note on Link prediction
